

Submission Instructions for Programming Assignments

You are encouraged to work on the programming parts of the assignments in teams of two, however you are free to do so individually.

Deadlines: The submission deadlines for programming assignments would generally be 10 PM on Tuesdays. Any submission past the deadline would incur a penalty of 20 points per 24 hours beyond the deadline.

Executable Files: Each programming assignment submission must have an executable named `RUN.jar` or `RUN.sh`. If the submission does not contain an executable with either of these name and extension combinations, it will not be graded. Assignment specific instructions for command line arguments and other parameters would be provided for each assignment whenever required. The submissions will be graded on a Unix machine running Linux Kernel 3.2 or above. Hence, any other submission format that assumes some operating system features etc. is not acceptable. If you are not familiar with the methods of building a JAR file, or shell scripting, please email the TA or look for the material online.

Programming Language: The programming assignments should be written in Java. The assignments would require an understanding of only the core features of the language, and not of the features related to web applications or user interfaces. If you are not familiar with the language, or need material for better understanding on some topics please email the TA or search online.
